We can help you decide which skin rejuvenation option is best for you.

Latisse®

Not enough lashes? LATISSE® is a prescription treatment for hypotrichosis (inadequate or not enough lashes) to grow eyelashes longer, fuller and/or darker. It is a topical solution applied daily before bed each evening, resulting in thicker, longer lashes in weeks.

Revision Skin Care®

For over 25 years, Revision Skincare® has provided physicians with clinically proven, high-performing skincare products. Using only the purest, most effective ingredients, the Revision Skincare® collection was formulated to provide targeted solutions for enhancing the skin’s appearance and reducing signs of aging.

John Hardeman, DDS, MD

John H. Hardeman, D.D.S., M.D., received his dental degree from the University of Missouri-Kansas City School of Dentistry in 1986. He continued his training at the University of Illinois College of Medicine and received his medical degree in 1989. This schooling was coupled with advanced training in oral and maxillofacial surgery at Carle Foundation Hospital and Clinics in Urbana, Illinois.

Location

We are conveniently located on the first floor of the dental tower at the UF Health main campus on Archer Road at 1395 Center Drive, Room D1-56.
Dermal Fillers

Dermal fillers are the cosmetic rejuvenator we have been waiting for. Fillers are so exciting because they offer a simple, predictable, cost-effective way to fill depressed facial areas without surgery.

They can be injected to fill depressions and recreate youthful contours. JUVÉDERM® Ultra Plus injectable gel is a hyaluronic acid gel that is injected into facial tissue to smooth wrinkles and folds, especially around the nose and mouth.

Hyaluronic acid occurs naturally in the human body.

Botox

Botox® is effective for lines and wrinkles that occur when the facial muscles are used. They are generally not effective for lines that are present when the face is relaxed, unless the lines are right over the muscles that can be treated.

Skin Lesion Removal

Are those skin spots normal?

We all get spots on our skin. Most of the time they are small, light brown and hardly noticeable. When we are young, most of the spots are normal, like freckles. But some spots are abnormal, really unattractive and can become cancer. We see many worrisome, unsightly spots form on the face because it gets so much sun exposure. We offer spot and mole removal for both cosmetic and cancer-concerning lesions.

Pellevé®

You can feel the Pellevé® difference.

The Pellevé® treatment is virtually painless and generally quite pleasurable, unlike many other energy-based procedures.

It is a very comfortable skin tightening treatment that takes less than an hour. You can go back to work and resume your normal routine right away, and no one will know you have had anything done.
