This message is high priority.

To: All axiUm users at the UF College of Dentistry,

During December 29-31, the college is upgrading axiUm from version 5.11 to 6.0.3, which is the newest version. There are quite a few very interesting features, including a completely redesigned treatment planning module. This update also lays the foundation for further improvements that axiUm plans to roll out in early 2016.

Important points:

- AxiUm will be offline most of the day on December 29 from about 11am to 6pm.
- There are mandatory online training sessions for all users that must be completed by January 3, 2016 at 6pm. The online training should become fully available by Friday December 11th.
- The trainings will be in the SumTotal/MyTraining module from UF Health; e-mail notifications will start going out this week as the courses become available and are assigned to your user group. For each axiUm role you have assigned to you, you will have to complete the related training module.
- The training modules are short; generally under 10 minutes. There are no quizzes, but you are required to read the PDFs and watch the short videos assigned to your general role at the college (provider, business office, front desk, etc.) and electronically attest that you’ve done so. You may need to go through more than one session if you perform multiple roles at the college.
- The college administration determined that users who don’t complete assigned courses will not be able to access axiUm after January 3, 2016.
- Reminders to complete training will be sent via the MyTraining system, and departments will receive updates during December regarding training completion.

Thank you for your patience and cooperation. We think you will find the improvements with this version and those that will be added in 2016 will make axiUm use much more streamlined and user friendly. If you have any questions about the update, please feel free to contact me.
